INDUSTRIAL ETHNOLOGY
A BIBLIOGRAPHY OF SOURCES FOR THE
STUDY OF OCCUPATIONAL GROUPS

by

William W. Pilcher
Department of Anthropology
State University College at Brockport
Brockport, New York

INTRODUCTION

This bibliography grew out of my efforts to collect sources for the study of a group of longshoremen. I found it extremely difficult to find sources dealing with longshoremen and almost as difficult to find sources dealing with blue-collar workers. Most of the literature deals with broad categories of occupations such as skilled workers, semi-skilled workers and so forth. Literature dealing with specific occupations such as longshoremen, construction workers, miners, and railroaders is still very scarce. There is, however, a small but growing number of scholars who are carrying out ethnographic research dealing with people who work at one specific occupation. I have included the work of every such scholar known to me, and have drawn on the sources collected by other researchers, specifically Frederick Gamst of Rice University and Leif Landberg of the University of Rhode Island, in constructing this bibliography.

Because the greatest amount of material to be found dealing with workers is still in sociology, I have included several sociological works in this bibliography. Another source that may be of utility to researchers in this area is Leif Landberg's "Bibliography for the anthropological study of fishing industries and maritime communities" (University of Rhode Island, Kingston, Rhode Island).

Although I have attempted to make this bibliography as comprehensive as possible, there are undoubtedly sources that I have overlooked, and I would greatly appreciate hearing from anyone who knows of such sources.
